These images were taken from Dilworth Road. There was incredible smoke in the air and this is the activity behind the smoke. You can see the smoke and heat leading on the left side of the fire so the wind is blowing it Northeast. The distance we were imaging here is miles away and some of the plumes of heat must have been a thousand feet high. Forestry doesn't have much time to work on this tonight so it looks like a long night for the fire to burn as it will.
